

WEEK -2 TASK

EFR32ZG28:

The EFR32ZG28 is a wireless SoC (System on Chip) developed by Silicon Labs as part of their EFR32 "Wireless Gecko" series. It is optimized for low-power and secure wireless communication, primarily used in Sub-GHz, Wi-SUN, and Proprietary RF applications.

Memory:

Flash : 512 KB

RAM : 64 KB

I/O and Peripherals

- GPIOs
- USART / I2C / SPI
- ADC / DAC
- Timers / PWM
- Crypto engine for AES-128/256, ECC, SHA-1, SHA-256

Core:

Family: ARM Cortex-M33 in EFR32ZG28

The EFR32ZG28 SoC (System on Chip) is built around the ARM Cortex-M33 core, which is highly efficient, secure, and low-power, making it perfect for IoT and wireless communication tasks.

Clock Speed : Up to **76.8 Mhz**

Bit width : 32 bit

TrustZone® Support

ARM TrustZone splits the system into two parts:

- Secure World – for sensitive tasks (e.g., secure boot, crypto, device keys)
- Non-Secure World – for general tasks (e.g., networking, sensors)

This enables secure OTA updates, crypto processing, and safe separation between app code and system-level security.

DSP and FPU Support

- DSP (Digital Signal Processing): Allows efficient processing of signals, such as filtering, FFT, or analyzing sensor data in real-time.
 - Example: Processing environmental sensor data like gas levels, temperature, etc.
- FPU (Floating Point Unit): Hardware accelerator for floating-point math (e.g., `float`, `double`)
 - Example: Smooth BLE RSSI averaging, signal filtering, sensor fusion algorithms

CONTIKI -OS:

Contiki OS is a lightweight, open-source operating system designed for:

- IoT (Internet of Things) and wireless sensor networks
- Low-power embedded devices
- IPv6, 6LoWPAN, CoAP, RPL support (for networking in tiny devices)
- It runs directly on hardware (no other OS below it)
- Mostly written in **C language**.

Contiki-NG does **not officially support** EFR32ZG28

contiki-ng/

```
|— arch/          <-- Platform architecture
|  |— cpu/
|    |— arm/
|      |— cortex-m/ <-- Your core is here (Cortex-M33)
|— platform/      <-- Your EFR32ZG28 board files go here
|  |— efr32zg28/   <-- YOU create this
|— os/            <-- OS core
|— examples/      <-- For testing
```

CONTIKI OS INSTALLATION:

```
sudo apt update
```

```
sudo apt upgrade
```

```
sudo apt install git build-essential python3-pip srecord ccache
```

```
sudo apt install gcc-arm-none-eabi
openocd screen
git clone https://github.com/contiki-ng/contiki-ng.git
cd contiki-ng/
git submodule update --init --recursive
```

Goal

Run a basic **LED blink process** on the **EFR32ZG28** board using Contiki-NG, which does **not natively support** this platform.

```
contiki-ng/
├── arch/
│   ├── platform/
│   │   └── efr32zg28/
│   │       ├── Makefile.include
│   │       ├── contiki-conf.h
│   │       ├── platform.h
│   │       └── dev/
│   │           ├── leds-arch.c
│   │           └── leds-arch.h
└── examples/
    ├── efr32zg28/
    │   ├── blink.c
    │   ├── Makefile
    │   └── project-conf.h
```

Create Platform Folder

```
mkdir -p ~/contiki-ng/arch/platform/efr32zg28
```

```
contiki-conf.h
device_config.h
Makefile.efr32zg28
Makefile.include
platform.c
platform.h
rtimer-arch.c
rtimer-arch.h
```

Fix Makefile.include

```
### Board Configuration
```

```
BOARD = efr32zg28
```

```
BOARDS = efr32zg28
```

```
### Gecko SDK Path (verify this matches your installation)
```

GECKO_SDK = /home/abarnikag/SimplicityStudio/SDKs/gecko_sdk

Device Configuration - MUST COME FIRST

```
CFLAGS := -DPART_NUMBER=EFR32ZG28A122F1024GM48 \  
-DDEVICE_FAMILY=efr32zg28 \  
-D__PROJECT__="EFR32ZG28" \  
$(CFLAGS)
```

Include Paths

```
CONTIKI_TARGET_DIRS += . ../cpu/arm/cortex-m33  
CFLAGS += -I$(CONTIKI)/arch/platform/$(TARGET) \  
-I$(CONTIKI)/arch/cpu/arm/cortex-m33 \  
-I$(GECKO_SDK)/platform/emlib/inc \  
-I$(GECKO_SDK)/platform/Device/SiliconLabs/EFR32ZG28/Include \  
-I$(GECKO_SDK)/hardware/kit/common/drivers \  
-I$(GECKO_SDK)/platform/CMSIS/Core/Include
```

Source Files

```
CONTIKI_TARGET_SOURCEFILES += platform.c rtimer-arch.c
```

Module Configuration

```
MODULES += $(CONTIKI_NG_ARCH_DIR)/platform/$(TARGET)
```

Include ARM Cortex-M common makefile

```
include $(CONTIKI)/arch/cpu/arm/Makefile.arm
```

blink.c – Creating the Process

Path: ~/contiki-ng/examples/efr32zg28/blink.c

Makefile – Building the Example

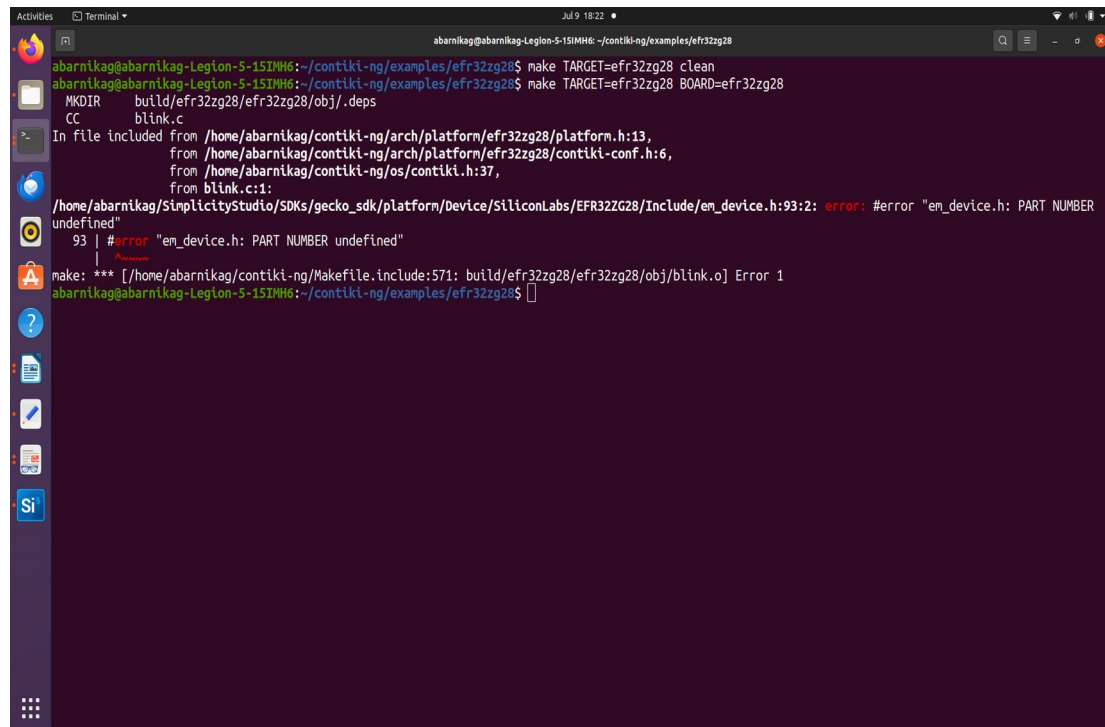

Path: ~/contiki-ng/examples/efr32zg28/Makefile

Build the Blink file:

```
make TARGET=efr32zg28 clean
```

make TARGET=efr32zg28 BOARD=efr32zg28 V=1

Here I am Facing Error:

A terminal window with a dark background and light text. The window title is 'abarnikag@abarnikag-Legion-5-151M46: ~/contiki-ng/examples/efr32zg28'. The terminal shows the following commands and output:

```
abarnikag@abarnikag-Legion-5-151M46:~/contiki-ng/examples/efr32zg28$ make TARGET=efr32zg28 clean
abarnikag@abarnikag-Legion-5-151M46:~/contiki-ng/examples/efr32zg28$ make TARGET=efr32zg28 BOARD=efr32zg28
MKDIR    build/efr32zg28/efr32zg28/obj/.deps
CC       blink.c
